

Third Party Software Versions Validated with Spacelabs Flexport Products

The Spacelabs Flexport products allow presentation of non-Spacelabs medical device data as an additional parameter on your Spacelabs monitoring system. Each non-Spacelabs medical device software version uses a unique communication protocol to interface with your Spacelabs medical device. The purpose of the protocol is to present data in a specific predictable format.

The list below identifies third party software versions validated for use with the Spacelabs Flexport products. Any other third party software version may not present data appropriately. The list of validated third party software versions will be regularly updated at:
